

Hello World *Fancy*

Name: Hayden Pack

Teacher: David Retterer

Subject: Net-Centric Computer Programming Date: 1/24/2017

Introduction:

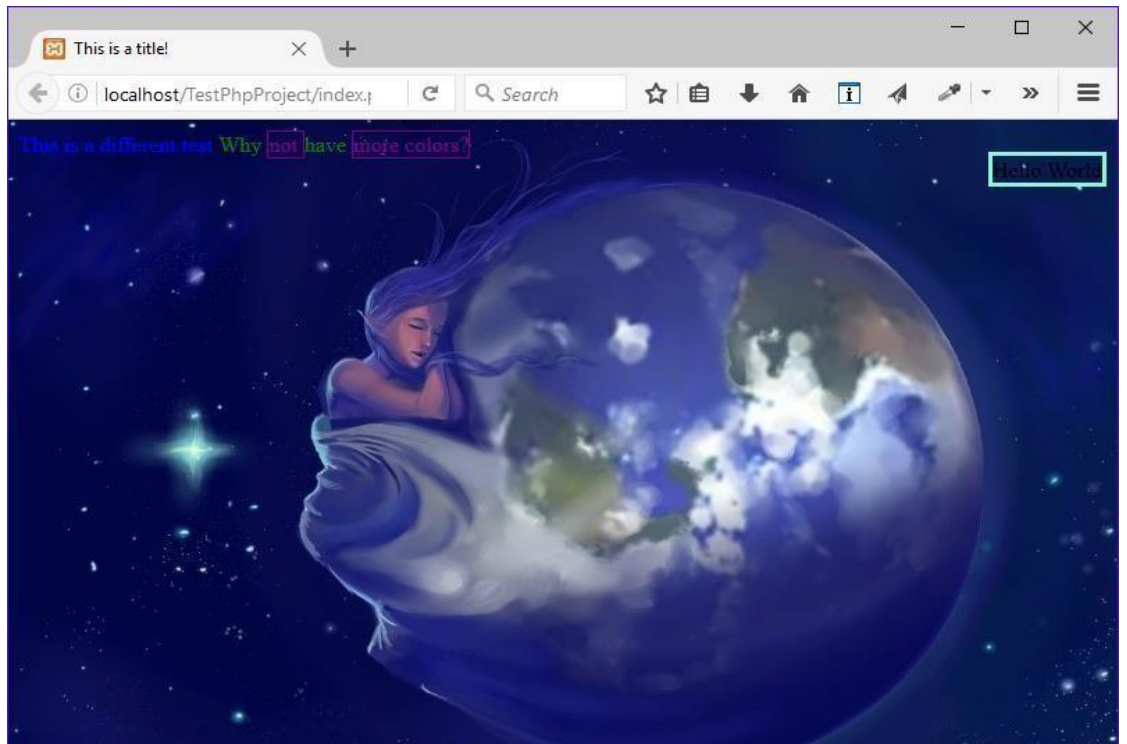

The assignment was to take our original hello world project more fancy. To do this I decided to take what we had learned in class and add it to my original hello world project. The process that I used to complete this project will be explained in the following paragraph.

Background

Body:

To make the hello world program more fancy I added most of what was shown in class. I used a paragraph with an id to place the hello world right justified with an aquamarine border. From there I decided to add a span with an id to the document and changed the color of the text to blue. From there I made two spans with different classes

and used them to create green text and purple text with a purple border. All of the code I added was shown in class.

Conclusion:

In conclusion to complete this project I used much of what was taught in class. This includes spans, paragraphs, and ids. I also used a separate css file to format the coloration and borders. There was less added to this compared to the original file as I had already made my original Hello World project fancier before this was assigned.

Code: index.php:

```
<html>
  <head>
    <meta charset="UTF-8">
    <link rel="stylesheet" type="text/css" href="style.css">
    <title>This is a title!</title>
  </head>
  <body>
    <p id="test">
      Hello World
    </p>
    <span id="second">
      This is a different test
    </span>
    <span class=green>Why <span class="purple">not </span>
have</span> <span class="purple"> more colors? </span>
    </body>
  <style
type="text/css">
body
{
```

```
        background-image:url('earth.jpg');
    }
</style>
</html>
```

```
style.css: #test{
border: 3px solid
aquamarine;
    float: right;
}
#second{
    color:blue;
}
```

```
.green{
color:green;
}
.purple{
color:purple;
border: 1px solid
purple;
}
```
